

BCHNHST

**Good Practice Supporting
inpatient services to develop a
comprehensive care planning
process.**

Michael Loftus 0121 465 8400

10/2/1

Assessment

Based on person centred information, likes and dislikes, wants and aspirations, skills and abilities.

Multidisciplinary

Planning

Who is involved, who does what, when, how.

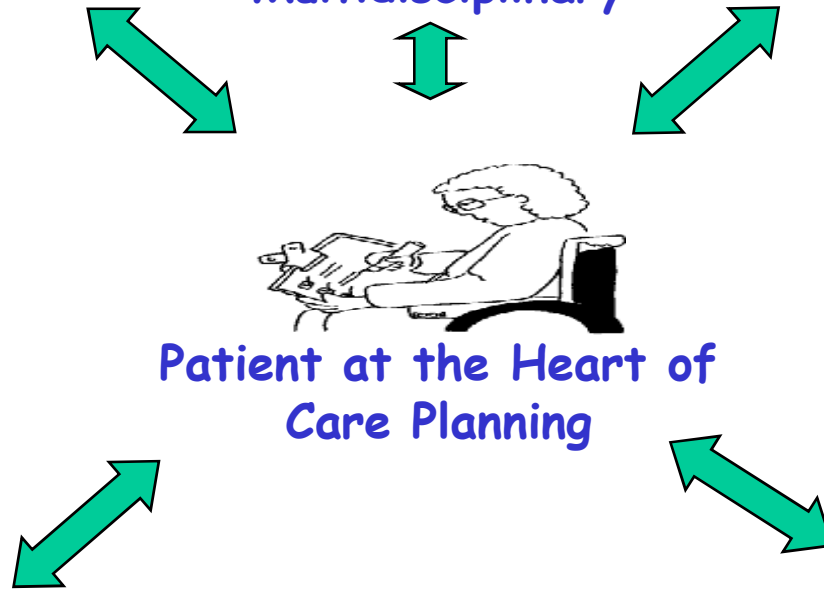

Patient at the Heart of Care Planning

Implementing

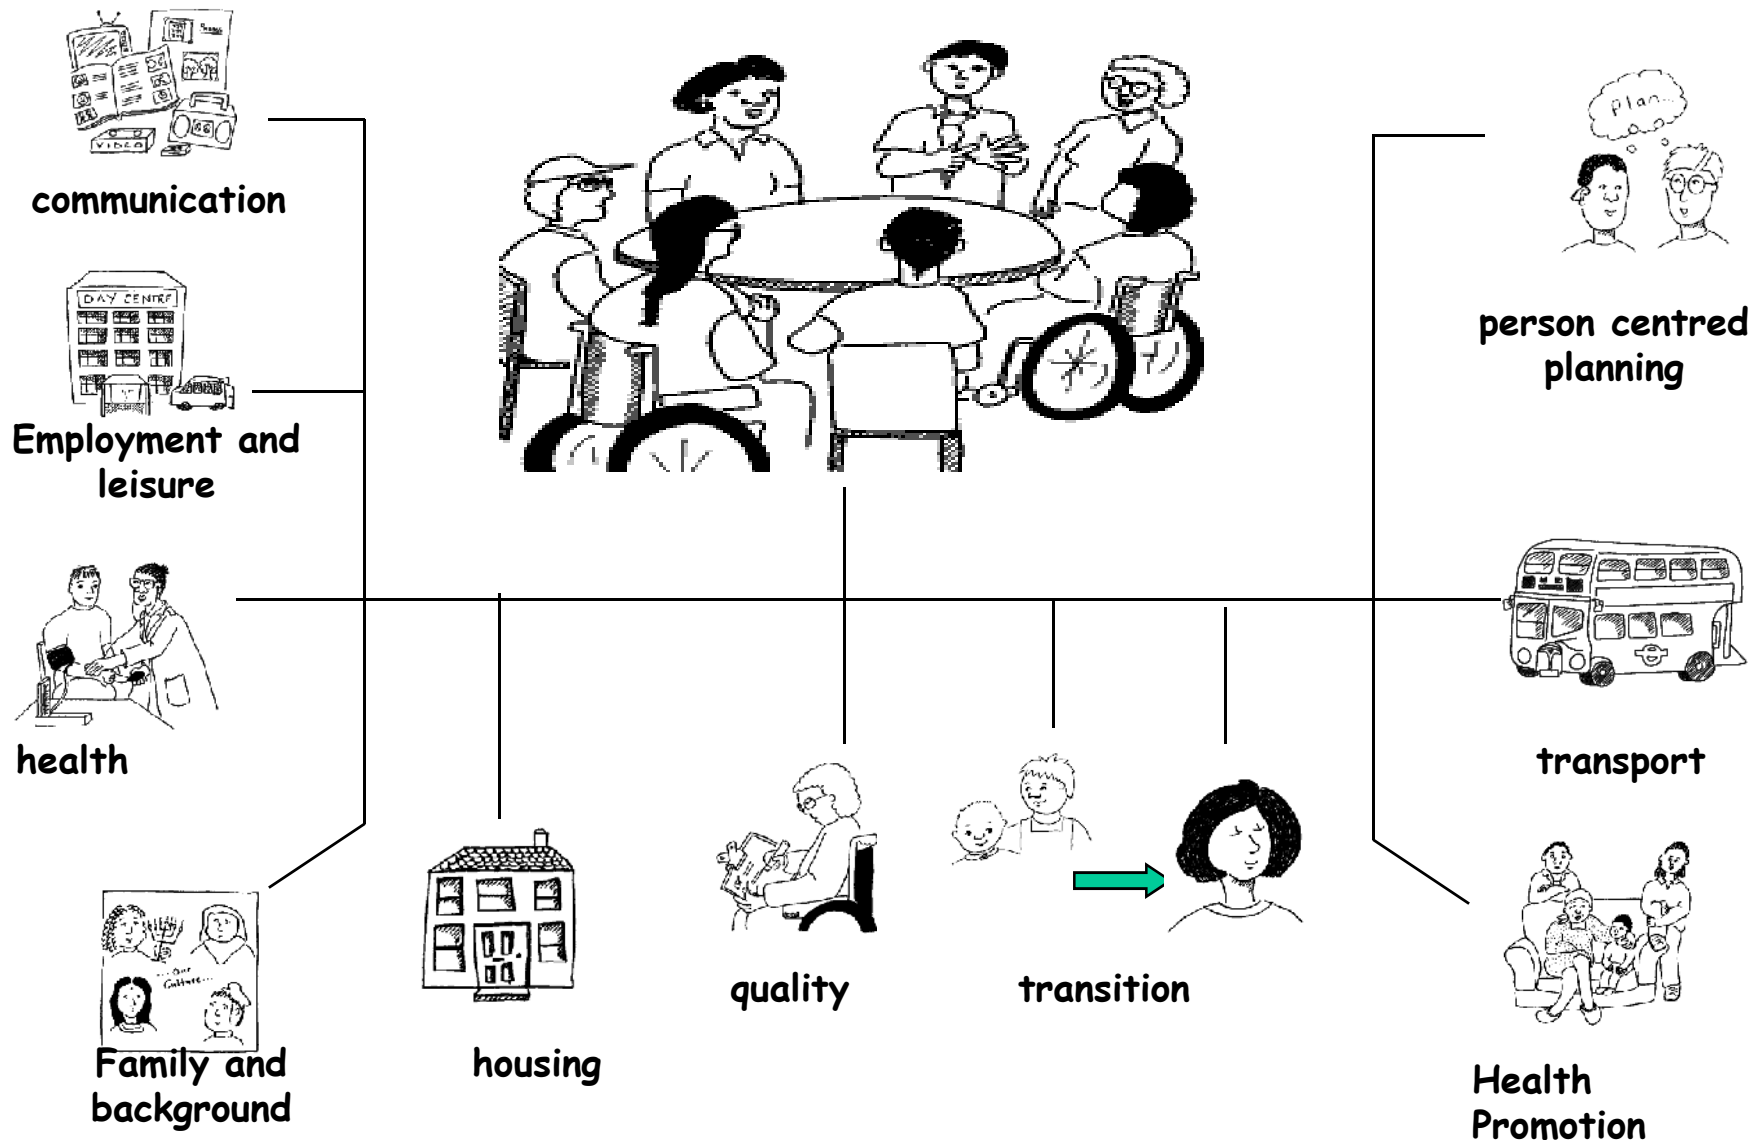

Has the plan been implemented, do we have evidence, is the care plan actively used.

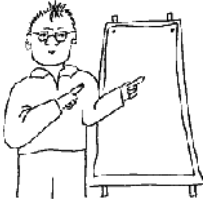

Evaluation

What is the outcome for the Patient, positive or negative.

Care Planning process

- This Good practice relates to supporting a comprehensive Care Planning Process to ensure each Patients needs are met within Inpatient services.
- The Inpatient Care Planning process focuses on assessment, planning, implementation and evaluation of care within the Patients living environment.
- The Inpatient Care Planning process looks to dovetail with one Multidisciplinary Care Plan which supports Multidisciplinary team work.
- The process encourages and respects patient's wishes, human rights, and Mental Capacity Act principles and encourages thought of one Patients journey within an NHS facility.
- The process looks to balance physical and psychological needs focused on Health care.
- The process relies on Partnership working between Patients and Carers and Best interest processes for anyone who lacks capacity in terms of care provided.
